THE BIOLOGY PROJECT

-Learn to think biologically-

A project by Urkraft Leben Association

HOW DOES THIS PROGRAM WORK?

This 8-week educational program is focused on deepening your awareness and practical understanding of biological processes.

Each week features a 3-hour interactive live session.

The Five Biological Laws of Nature create a new way of thinking and understanding. They change our perception.

This is not another theory-based program. Instead, it emphasizes practical application and real-world biological thinking so you can start to see and think biologically in your everyday life.

WHO IS THIS PROGRAM FOR?

This program is intended to help anyone understand their biological inner nature. Our life is governed by natural laws, whether we like it or not. Just as we cannot change the sun setting today and rising tomorrow, so we also cannot change our biological code.

We can, instead, work on how we perceive the world around us. Knowing our biological code brings clarity and peace into our lives and with time, we become more flexible.

Learning to think biologically improves our well-being and that of those around us.

Martin is native German and combines solid knowledge with a rare gift: the ability to explain complex topics with simplicity, clarity, and common sense. His objective, drama-free insights and light-hearted humour make him both relatable and deeply respected. With over 20 years of personal experience in Germanische Heilkunde, Martin lives what he teaches—together with his wife and four children on a permaculture farm and through his international association, Urkraft Leben ("Primordial Power of Life").

This makes him the perfect person to guide you through this 8-week deep dive into biological thinking.
